

I use XM Satellite radio while traveling in my car to and from my remote mountain home. Weather reports are not available other than by satellite where and when I want to know what is going on in Central California. It seems to me the National Association of Broadcasters is afraid of some competition. But XM Satellite Radio suits my needs perfectly. Please tell the NAB to back off of pushing for censorship, and let those who offer a better product thrive.

My Best,

Larry Taylor
